

Investment protection

Leaky roof! Two of the most troubling words in any building owner's vocabulary. Five of the best words? Conklin Fabric reinforced Ply Systems. Cover your roof with a seamless coat of protection and eliminate the leaking.

Drive down your energy costs

The formula: Saving money on air conditioning + Lowering heating bills = Return on Investment. The Conklin highly reflective roofing systems, with added insulation, can pay for itself through reduced energy consumption, in as little as four to seven years. Our roofing systems have earned the Environmental Protection Agency's ENERGYSTAR designation for keeping structures cool.

A durable, breathable system

Conklin's ENERGYSTAR rated roofing systems help the roof surface stay cooler by reflecting the sun's ultraviolet rays, rather than absorbing them in the form of heat. A cooler roof makes it easier to maintain a cooler workspace and reduces the extreme movement that can lead to the premature demise of your investment. Conklin acrylic elastomeric roof coatings also offer the benefit of breath ability. Think of a Conklin fabric-reinforced system as a high-performance raincoat for your building. Strong and flexible enough to keep out the elements, yet smart enough to prevent small amounts of interior water vapor from becoming trapped in the roof's insulation, thus destroying its thermal efficiency. Any way you look at it, Conklin Ply Systems offer durability and flexibility for the long haul.

Choice to meet your needs

You choose the elastomeric, VOC compliant roof coating which best meets your needs. Each fabric-reinforced system is sustainable, upgradeable and recoatable without any Environmental concerns.

Benchmark"

Resistant to acid rain, air pollutants and ultraviolet degradation. Conklin's premier roof coating provides the ultimate combination of flexibility and strength for your toughest projects. This 100 percent acrylic coating is recognized by most major code organizations, including Underwriters' Laboratories (UL), Factory Mutual, Miami-Dade and the International Code Conference. Extremely resistant to acid rain, airborne pollutants and ultraviolet degradation, Benchmark also features an ENERGYSTAR rating and an 85 percent solar reflective value for maximum energy efficiency.

Rapid Roof III

Cures to tack-free, dirt resistant finish. The workhorse of the Conklin roof coatings line, Rapid Roof has proven itself with a track record of trouble-free service since 1977. This lightweight, flexible, seamless and weatherproof system carries a UL Class A fire classification. Rapid Roof III in standard white provides a 79 percent reflective, tack-free, dirt resistant finish. Continuing to lead in innovation, Rapid Roof III offers several optional colors that also meet the ENERGYSTAR requirements for reflectivity and Energy efficiency

Rapid Roof HV

Waterproof, seamless flexibility. This High Value system delivers the same waterproof, seamless flexibility and durability of the other roofing systems, but at a lower price because it doesn't. Carry the costly code approvals and fire ratings. Rapid Roof HV features an 82 percent solar reflective value and meets the requirements for the ENERGYSTAR program.
